Usability issues found with Heuristic Evaluation

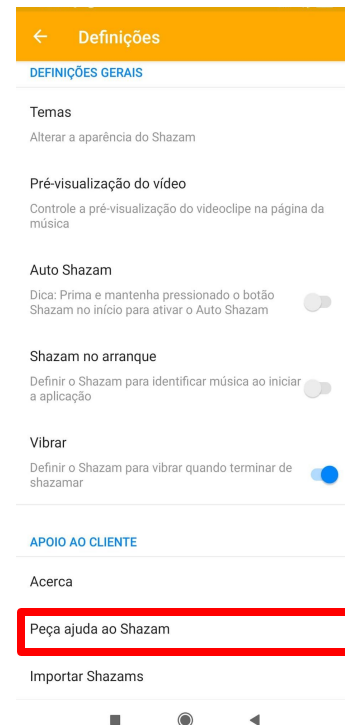

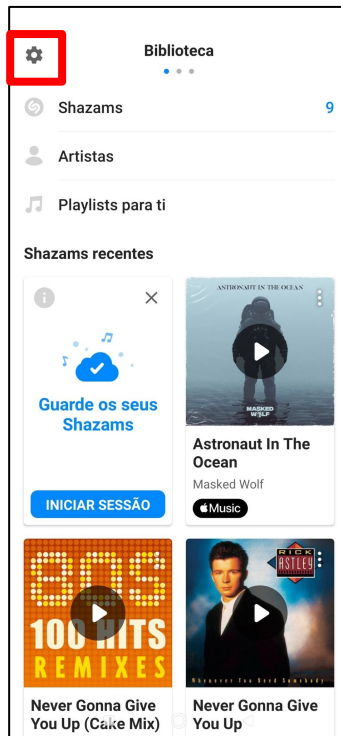

- Use control and freedom (Severity = 2)
 - Not very intuitive to navigate from page to page
- Consistency and Standards (Severity = 2)
 - Application pages all different
- Recognition rather than recall (Severity = 1)
 - Difficult to remember where to get help
- Flexibility and efficiency of use (Severity = 3)
 - Can't sort a song from the Shazams page and the same song can appear more than once
- Help and documentation (Severity = 2)
 - Not easily accessible

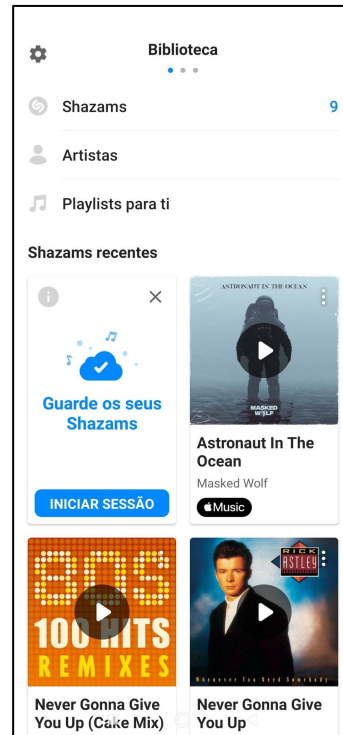

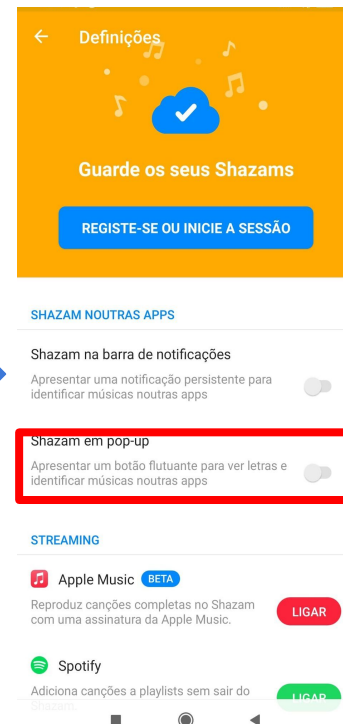

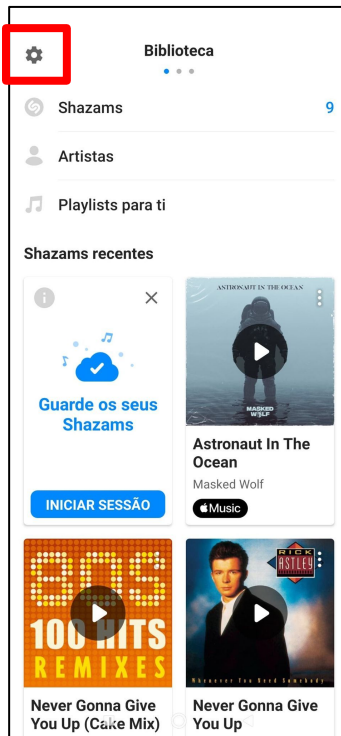

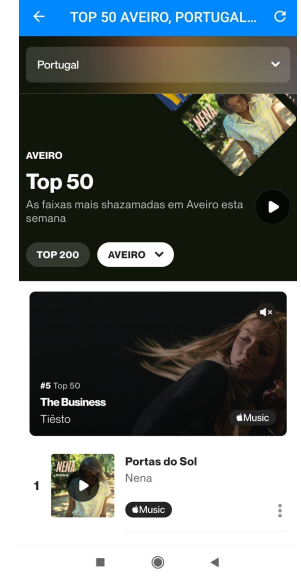

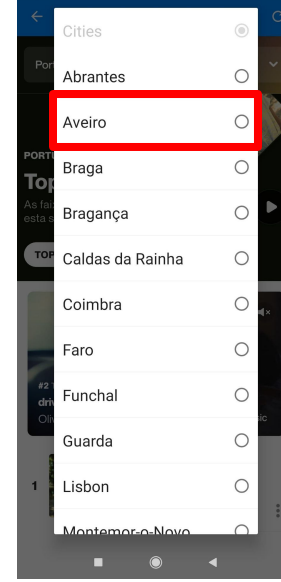

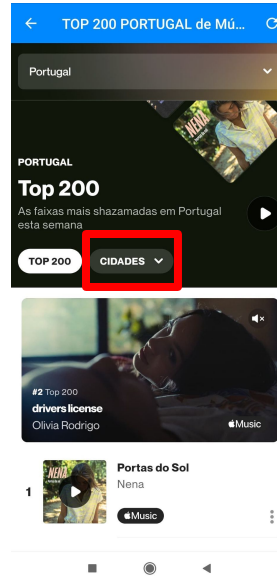

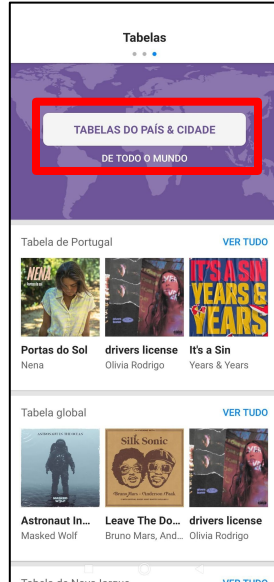

Streamlined Cognitive Walkthrough

- User: any adolescent
- We choose 4 tasks to evaluate:
 - Find help documentation
 - Find history of shazams
 - Activate Shazam pop-up
 - Find top shazams in Aveiro
- For each task we asked 2 questions:
 - Will the user know what to do at this step?
 - If the user does the right thing, will they know that they did the right thing, and are making progress towards their goal?

Usability issues found with Cognitive Walkthrough

- Lack of information, hard to know if we are taking the right steps to achieve the goal.
- The settings icon is not intuitive to find, should be more clear and easy to reach, perhaps in the first page of the application.

Appreciation of the product usability

- Despite the usability issues, the application is perceived as easy to use and simple to learn because of its minimalist design.
